

Where do I get iContact credentials for my web sign-upform?

Easy way:

- Copy & paste the form into this app:
<http://www.intellispire.com/apps/icontact.php>
- Press "submit".

Manual way:

- From your iContact account- inside the setup new form process.
- The information you are seeking is inside the text box at the bottom of the page that you get to after saving the fields that you want to collect - right now only name and email.
- In the Manual Sign-up Form box, You will need to scroll down until you see the input type=hidden name
- The information you are looking for is the digits or letter that follows value="
- Use only the numbers or letters, not the instruction.

In this example:

listid " value=**123455**

specialid" value= **PLGR** (NOTE: these letters are preceded by the listid number. Ignore the number and use only the letter.)

clientid" value=**567891**

Remember, to complete your iContact configuration on your MWG site, using the iContact Gizmo -- the code that properly connects your MWG form to your iContact account -You only need the numbers and letter in bold above.

Manual Sign-up Form:

This option requires you to manually update the code on your company's website if you make any changes in iContact.

iContact supports Https. If your website is in Https, you can modify the Urls in the HTML editor below.

```
</td>
</tr>
<input type=hidden name="listid"
value="123455">
<input type=hidden name="specialid:
value="PLGR">
<input type=hidden name="clientid
value="567891">
```

You are looking for the number after value equals

Why would I use the Manual Sign-up Form?

You may want to use the Manual Sign-up Form if:

- You are familiar with HTML and wish to edit the Sign-up Form code yourself
- You don't want to rely on iContact to serve up your Sign-up Form

You see that I scrolled down about half way to find the necessary information
